Why the Mystery?

Why Shouldn't You Know What Is in a Good Lawn Grass Seed Mixture Before You Buy It You Should Know What You Are Buying

- FACT 1 The more Certified Illahee Creeping Fescue and Kentucky Blue Grass a mixture contains, the better the mixture.
- FACT 2 Both are Perennials and live indefinitely. However, they require two or three years to reach full maturity.
- FACT 3 Meanwhile they need quick-growing Red-Top and Rye Grass as nurse crops to shade them in their early growth.
- FACT 4 Your first year's lawn is mostly Red Top and Rye Grass.
- FACT 5 After a few years, Certified Illahee Creeping Fescue and Kentucky Blue Grass will be at their best; they form the permanent lawn.

BURNETT-SEEDSMEN'S "FORMULA NO. 1" is a NO. ONE

BUILD LAWNS IN POOR SOILS WITH BURNETT-SEEDSMEN'S "POORSOIL LAWNMIX"

Drouth Resistant grasses is the answer to establishing a lawn in poor, sandy soils, for the same reason that camels, not horses, are used in the desert. - So, Burnett-Seedsman have selected the best drouth grass, namely, **Creeping Red Fescue (Illahee strain)**. Because of it's tolerance of drouth, Illahee is especially adapted to dry, sandy or gravelly soils—poor or rich. Illahee Creeping Red Fescue produces a deep rooted sod that withstands tramping and abuse. It spreads out, carpet-like, by means of underground rootstocks and overground stems. The grass blades are rich green, fine, smooth and soft; they stay green when other grasses brown and sear in Summer. Illahee is disease resistant; stands close cutting; grows in sun or shade and reaches full maturity in two years. It grows well with **Highland Bent**, also included in **Burnett-Seedsman's Poorsoil Lawnmix**. **Highland Bent's** growth habit somewhat parallels Illahee Fescue, especially being able to withstand adverse conditions of climate and low soil fertility. To these two permanent grasses is added a small percentage of domestic Rye Grass which acts as a nurse crop. **Burnett-Seedsman's "Poorsoil Lawnmix"** contains 75% Illahee Fescue, 5% Highland Bent and 20% domestic Rye grass, by weight.

NEW BLUE GRASS . . . MERION B-27

Although Kentucky Blue grass makes the finest lawn carpet, it does not grow well in warm climates and in poor, sandy soils, and is subject to disease, which slowly kills it off. A new strain, **Merion B-27** has been developed that is **disease resistant** and does well everywhere. Only hand-fuls are available.

ZOYSIA JAPONICA

(Japanese Lawn Grass)

CROWDS OUT CRABGRASS

Zoysia japonica, commonly known as Japanese Lawn Grass, was first introduced into the United States about 35 years ago from Korea where the climate approximates that of New York State.

Zoysia japonica is a low growing, sod forming perennial which if not mowed, will grow to a height of about 9 inches. It has a broad, somewhat course leaf similar to Red Top, but does not grow as tall.

Zoysia japonica is the only variety of Zoysia which is hardy and will grow in the South as well as in the North. It should never be confused with Zoysia matrella which is of value only to the southern end of Florida where it is sold as sod under the name of Flawn.

It is generally believed that Zoysia japonica will be of great value for the following reasons:

- (1) Its ability to withstand heat, long periods of drought and extremely cold climates.
- (2) Its ability to crowd out Crabgrass as it is most dominant during the Crabgrass season.
- (3) Its ability to provide a green cover during the summer months when other grasses, such as Kentucky Blue, turn brown and ragged. It will also hold its color into the late fall longer than others.
- (4) Its ability to withstand heavy traffic and its extraordinary healing qualities.
- (5) The fact that it is disease free and weed free. So far none of the known pests have attacked it. It is immune to Chinch Bugs.
- (6) Unlike its cousin Flawn, Zoysia japonica forms a loosely knit sod and in its early stages blends and lives in harmony with other grasses, especially Blue Grass.

Postpaid sows 600 sq. ft. area.
 1 lb. \$6.00; 5 lbs. \$25.00.

PARADISE (New '41)

Here is an asparagus that actually
 comes into bearing **ONE YEAR
 EARLIER** than any other variety.
 An exceptionally strong, vigorous
 producer. Some say it produces
 twice the crop of ordinary aspara-
 gus. The stalks are like Martha
 Washington in appearance, large
 and green. Just imagine, only 6 to
 8 stalks needed to make a pound.
 Its flavor is unusually mild and
 liked by all. Paradise is rust-
 resistant. Seed sown in Spring
 will bear asparagus for picking 2
 years later. One year old Para-
 dise roots, set out this Spring,
 will produce next year, asparagus
 as large and stalky as ordinary
 two- and three-year-old roots.

Roots: 1 yr. old—100, \$5.00.

Broccoli

Easier to grow than Cauliflower.

No other table green has captured the
 appetites of a Nation more than Broccoli,
 and why not? Its delicious fine flavor
 is appetizingly pleasing even to children,

 when the center flowers form, cut with
 about 7 in. of stem; this will be followed
 later by several smaller heads. No fuss
 in tying up, like in cauliflower.
